

CivicOps

Multi-agent civic emergency dispatch powered by Band

LIVE DEMO

MOBILE/PWA

AUDIT READY

<https://culltron.app/hackathon>

The civic operations gap

Municipal reports move faster than municipal systems.

- Citizen messages arrive through WhatsApp, calls, forms and voice notes.
- Reports are hard to classify, prioritise, route and track.
- Public updates are delayed or unclear.
- Audit trails are incomplete, making accountability harder.

FALLBACK DEMO

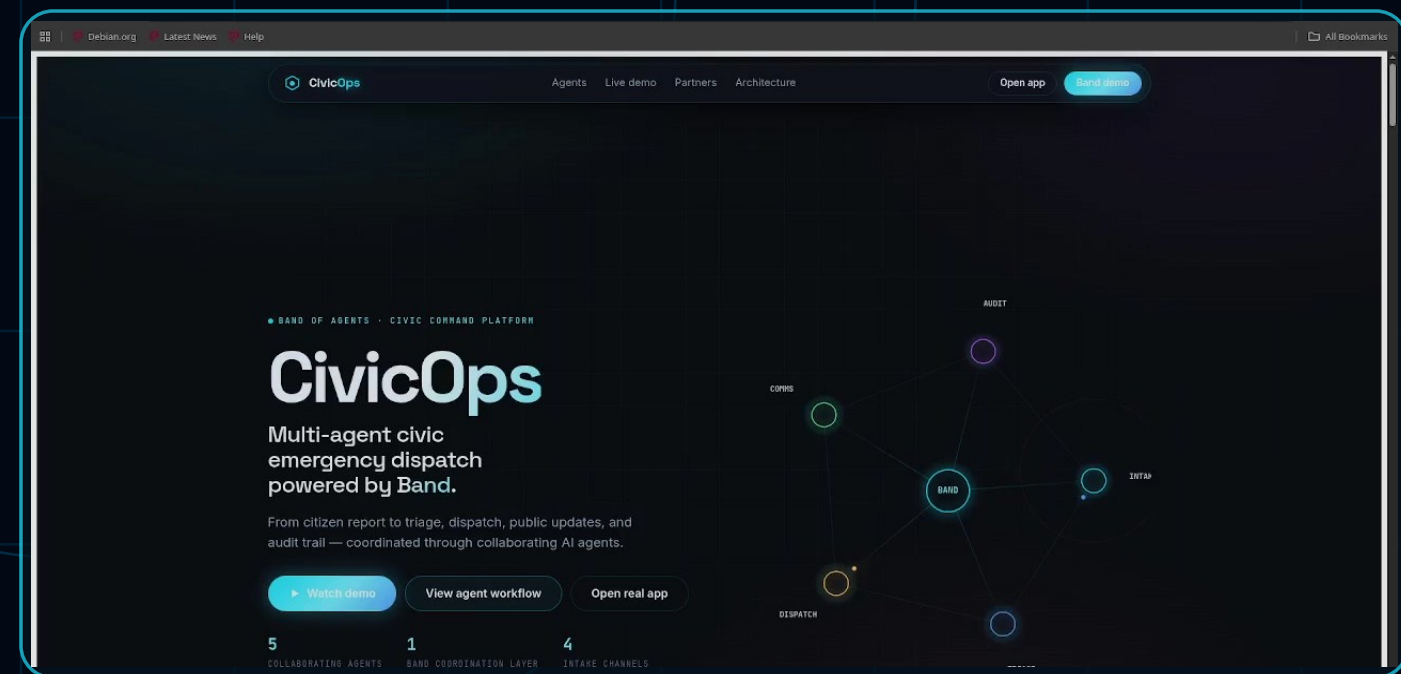

The solution

CivicOps turns citizen reports into a structured multi-agent response workflow.

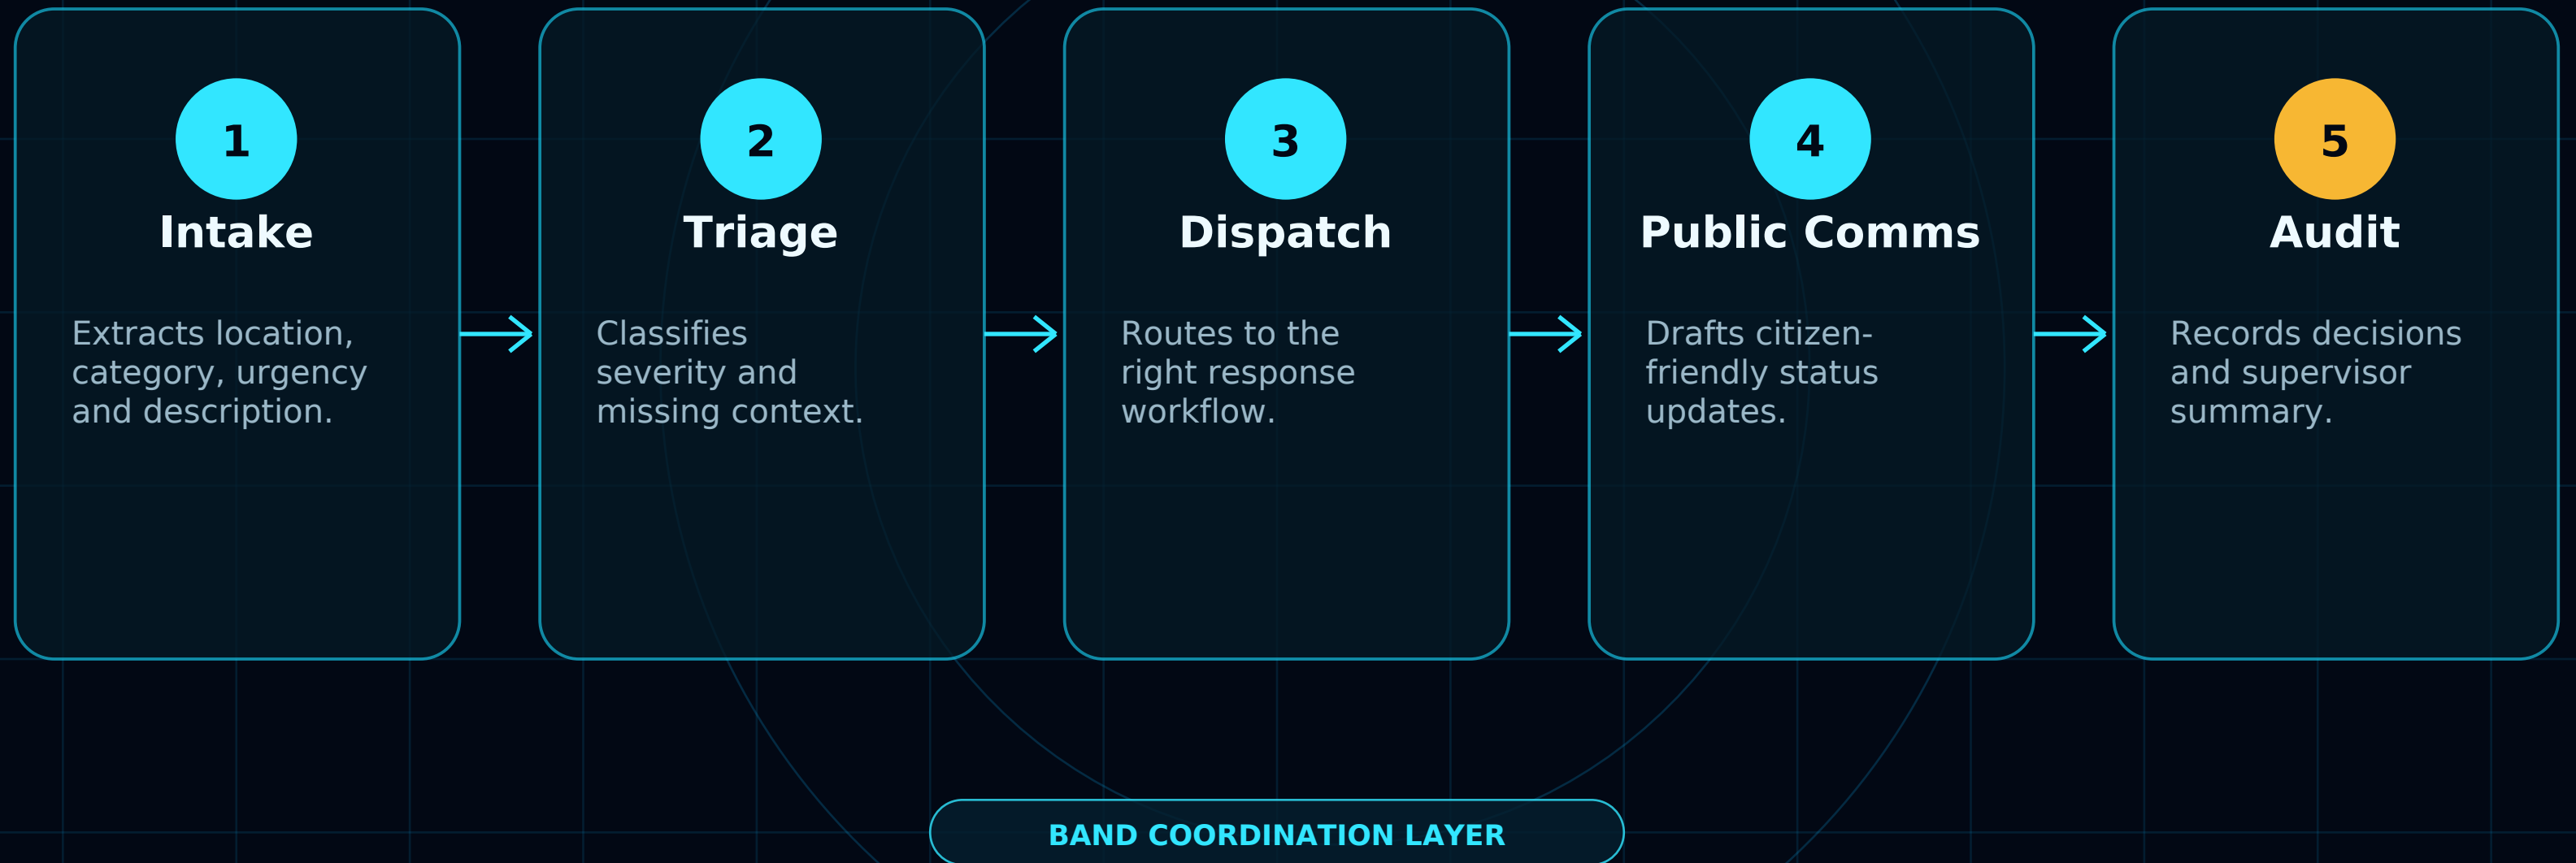

- One command layer across intake, triage, routing and audit.
- Focused agents each do one job, then hand off context.
- Deployed live with web, Band room, mobile preview and downloads.

Band multi-agent workflow

Band coordinates focused agents instead of one generic chatbot.

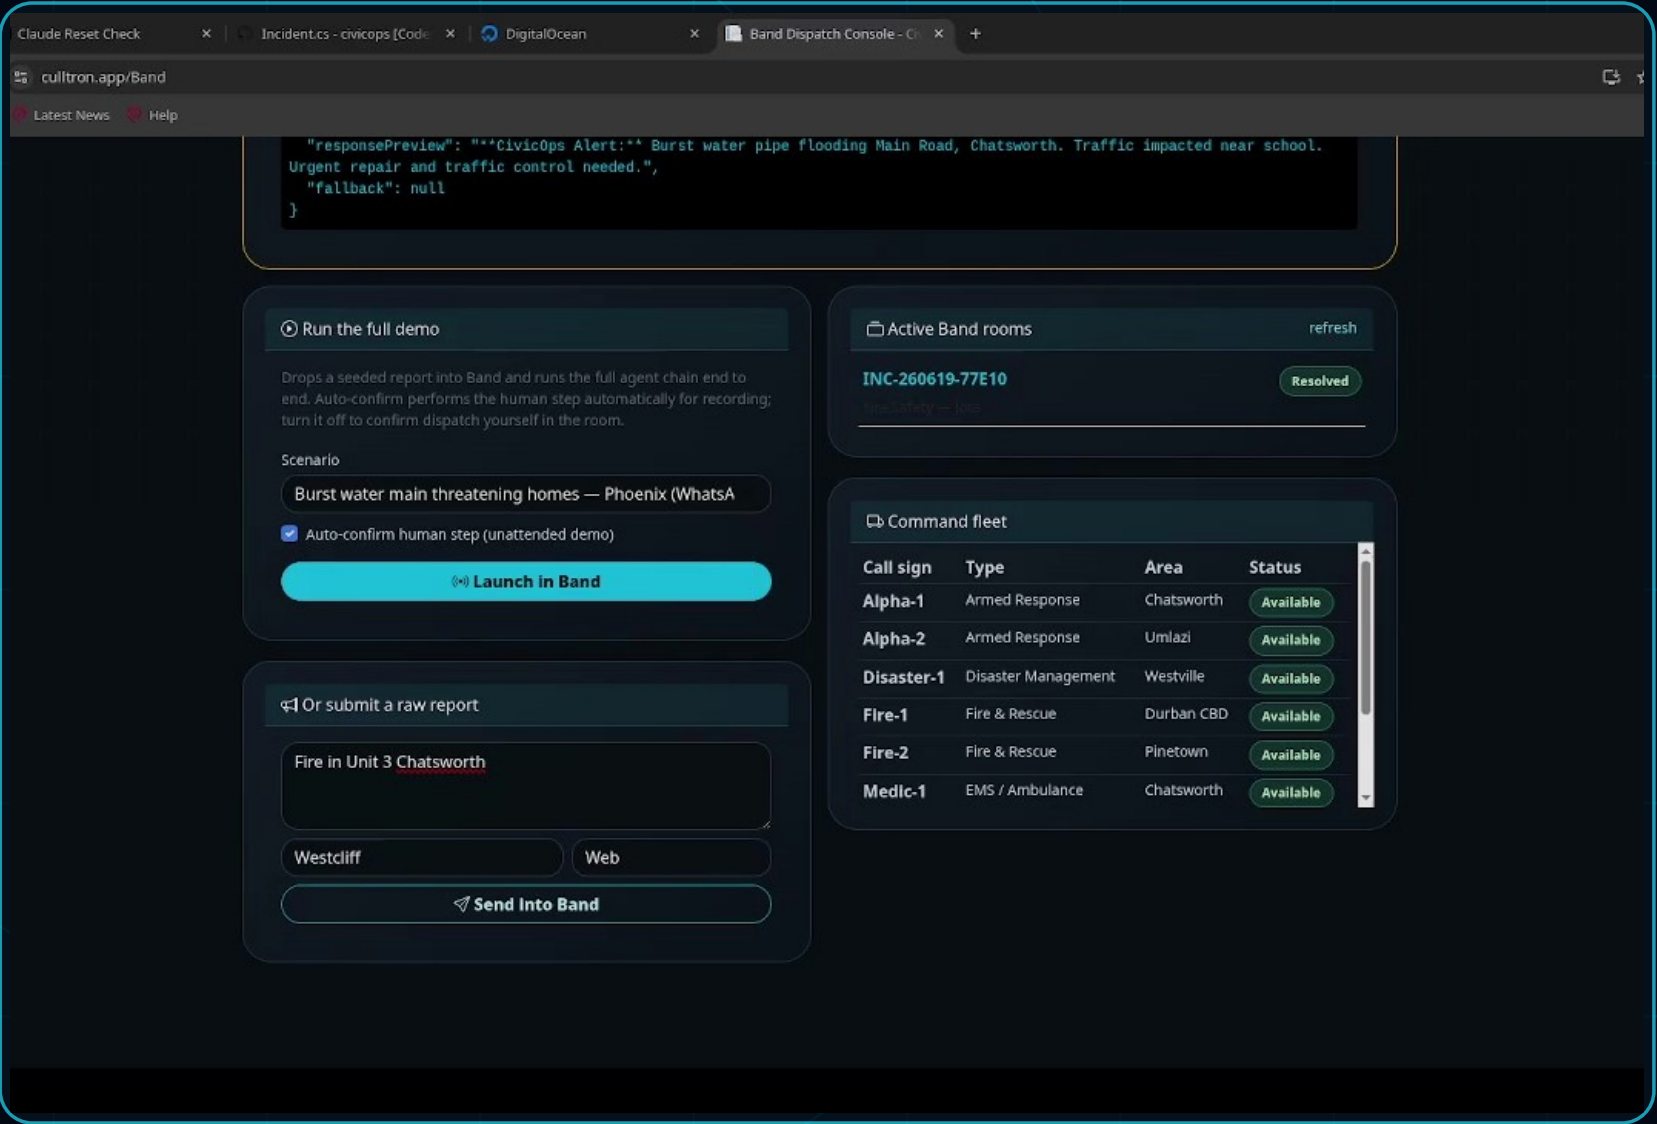

Live demo scenario

Scenario

- Resident reports a burst water pipe near a residential road.
- Water is flooding the street and affecting traffic.
- CivicOps extracts context and routes the incident.

Result

- Municipal water response selected.
- Citizen update prepared.
- Decision trail logged for oversight.

Technology partners

Visible, honest integration story for the hackathon.

Band

Core coordination layer for multi-agent handoffs across intake, triage, dispatch, comms and audit.

AI/ML API

Optional unified model provider for extraction, reasoning, summarisation and multimodal workflows.

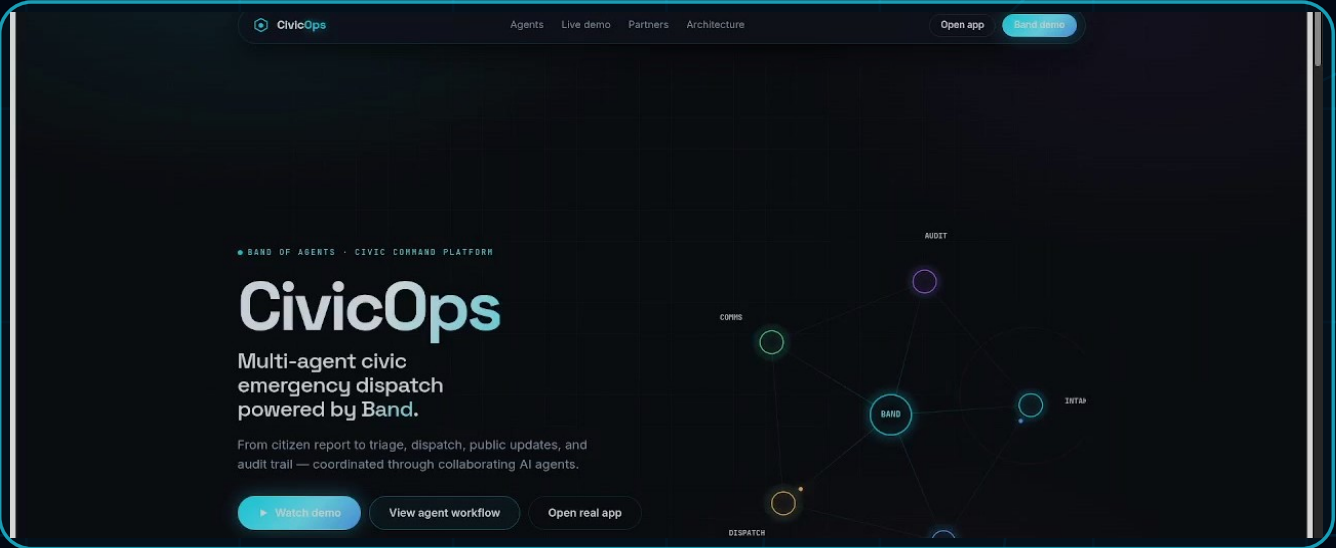

Featherless AI

Optional serverless open-source inference for specialised agent reasoning and generation.

Impact and scale

Designed for real civic workflows, not just a chatbot.

Faster routing

Reports become structured tasks.

Better public comms

Status updates are clearer and faster.

Audit-ready oversight

Every handoff can be reviewed.

Multi-department scale

Water, power, roads, safety and waste.

Fallback reliability

Demo remains working without external keys.

Architecture

Transparent municipal response: structured intake, coordinated agents, public updates and audit-ready governance.

Built for civic command workflows: traceable routing, explainable handoffs and public-sector accountability.
